Description

Industrial duty Wire Stripping Machine. Weighs 90 lbs. 1 HP Motor. Portable or stationary, it plugs into a standard U.S. 115 volt wall outlet. Handles 14 gauge and larger wire sizes up to 3" in diameter with feed rates up to 110 ft/min. Strips romex cable from 10 to 14 gauge. Very long lasting and sharpenable blade that is also easily changed. Replaceable, hardened steel blades in stock. Frame machined from solid aluminum plates. Slices wire insulation so plastic can easily be pulled from the copper wire. Maximizes scrap copper wire value.

This machine is assembled and has many parts that are machined in North America. Don't buy cheap imitations that are entirely made overseas and are impossible to get replacement parts and support for.

We stand behind this machine 100% and always offer complete repair services from our own staff of technicians.

Note: The On Off Switch on this machine has been changed from the original Design for better performance. See photo below

Recover copper and aluminum quickly and easily with these money making machines.

Model WS2
